GOOD DESIGN

Welcome to Miele

"Miele South Africa, Johannesburg, Bryanston, Showroom"

When the Miele company was first started back in 1899, the founders, believing that success was only achievable in the long term by being totally convinced of the quality of one's product, elected to produce machines that were both durable and long lasting.

Their motto "Immer besser", which translates as "Forever better", represents this philosophy. It remains our company motto to this day and permeates through every aspect of our business, from the drawing board down to the very last nut and bolt in a machine. And it is thanks to this philosophy that the Miele brand is now identified with unsurpassed product quality, worldwide.

Founded by Carl Miele and Reinhard Zinkann in 1899 with only 11 employees, Miele quickly gained recognition as a manufacturer of premium appliances.

To help meet demand there are subsidiaries in more than 30 countries making Miele the largest privately held appliance manufacturer in the world.

As our policy is one of continuous improvement, new features, accessories and colours may be introduced to models during the lifetime of this brochure. Your Miele Dealer will be pleased to advise on any later developments.

Miele came to South Africa in 1982. Since then the company has grown rapidly, moving to its current prestigious location in Bryanston, Johannesburg in March 2004.

Our Cape Town showroom opened at the end of September 2005. The Brooklyn Pretoria showroom opened in August 2008 and the Durban showroom opened in October 2009.

Our showroom trading hours are from Mondays to Fridays from 9.00 am to 5.30 pm and on Saturdays from 9.00 am to 1.00 pm. On Public Holidays and Sundays we are closed. If possible, please arrange an appointment for quality customer care in advance.

Immer besser – Forever better

Miele and the environment

Miele appliances have longer lives
Our philosophy is to make appliances that will last way into the future. So we have a vested interest in ensuring that there is a future for them to be around in. The longevity of Miele appliances in itself is a major contribution to the idea of conserving resources and economising on raw materials. The equation is a simple one: the longer the operating life of a machine, the less likely the need for new materials and the energy required in producing a replacement.

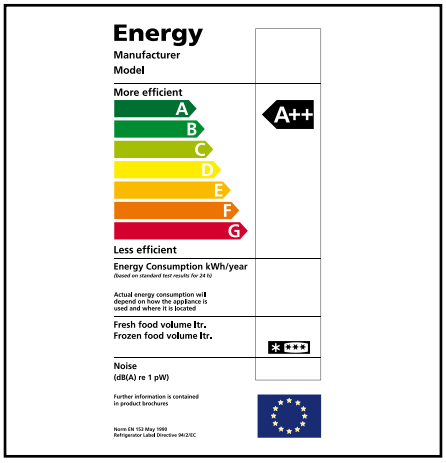
A commitment to our future
The long life of Miele appliances is legendary and so too is our commitment to making sure that we take care of our environment. Our Research and Development teams are continually striving to improve the performance of our appliances at the same time as conserving resources and economising on the raw materials used.

Reducing packaging
When it comes to packaging, our motto is “as much as necessary, but as little as possible”. Naturally we make it as environmentally friendly as we can, and all our packaging is recyclable.

Committed to the environment
Miele has put in place a comprehensive management system covering occupational safety, health issues, medical products, quality, social responsibility and environmental protection.

DIN EN ISO 14001 certification provides third-party validation that the Miele (environmental) management system is in compliance with the requirements of the DIN EN 14001.

Energy labelling
Refrigerators and freezers account for a fifth of our household energy consumption. When purchasing a new appliance, it always pays to opt for an energy saving model.



Thanks to the energy labels, you can easily judge how energy efficient each model is. Currently every product is rated from A++ (low electricity consumption) to G (high electricity consumption). All manufacturers label their appliances in this way, so you can see at a glance, which are the most efficient models and make your decision with economy in mind.

All Miele’s refrigeration appliances have an Energy efficiency rating of between A++ and B.

An A+ rating offers a saving of 25% over a current A rated appliance.

CFC and HFC free
The insulation material and coolants used in Miele’s refrigeration products were converted to CFC free and HFC free materials long before EU guidelines on banning CFCs and HFCs came into force.

The harmful substances previously used in the insulation material have been replaced with pentane and the coolant used now is isobutane R600a. This is an environmentally friendly natural gas which does not damage the ozone layer or increase the greenhouse effect.

Cool environment

Creating the perfect environment for the storage of food is the main purpose of any refrigerator or freezer. Miele refrigeration utilises the latest technology to ensure that not only is the internal environment created as efficiently as possible, but that it is also maintained, thus ensuring food is stored in the best possible conditions.

Sophisticated electronics on many models ensure the optimum performance is achieved and the temperature of the appliance is maintained to the exact degree. For an even higher level of performance, particularly for chilling food and controlling humidity, Miele offers models with Dynamic cooling and Perfect Fresh, which provide significant additional benefits.

CoolTouch controls

A variety of control functions are available depending on the model selected. For full details please refer to the individual specifications.

Many of the models in the range feature fully electronic controls that provide highly accurate temperature monitoring and alarm functions. LED indicators or temperature displays ensure temperature selection is precise and the system ensures the desired temperature is quickly reached.

The Super cool and Super freeze functions will, at the touch of a button, automatically reduce the interior temperature to ensure that the temperature of fresh produce is reduced as quickly as possible, retaining the consistency and texture of the food.

Acoustic and visual alarms are incorporated within the electronics to inform the user should the internal temperature rise above the desired level. For added peace of mind a warning tone also sounds if the door is left open for longer than 60 seconds.

Electronic touch controls combine accuracy, efficiency, ease of use and peace of mind.

Design and innovation

Introducing CleanSteel

Stainless steel has long been the material of choice for professional kitchens and is now very much a popular option for the domestic environment. It creates a professional look and coordinates with other appliances in the home. High quality brushed stainless steel surfaces have been given a special new finish that is resistant to fingerprints and soiling. Simply wipe with a damp cloth for exceptionally low maintenance.

Miele CleanSteel refrigeration appliances are the ultimate in style and sophistication with only premium grade steel used for the door and side panelling-in certain models.

A diverse product range is available on freestanding products, which includes many of our high-end features such as Perfect Fresh zones, Ice-makers, electronic Touch Controls and frost-free freezer systems.

CleanSteel steel from Miele: unparalleled elegance.

Sophisticated lines*

Simplicity of design creates an ageless classic. Clean, uninterrupted lines play an important part in creating the overall design of the appliance. Full height side panelling and doors provide a sleek finish. Controls are neatly hidden behind the doors to further enhance the overall look.

Classic understatement is provided by the subtly embossed Miele logo on the elegantly curved soft-line doors, together creating a stylish impression.

The look is further enhanced by the classic lever handle, which has been designed to provide excellent opening properties and complement the overall appearance of the appliance.

* Features will vary from model to model. Please refer to individual product specifications for full details.

Whether it's design or functionality that you are looking for, the Miele refrigeration range offers a broad spectrum of products to suit a multitude of lifestyle needs.

The attention to detail is exemplified by our desire to provide appliances of the highest quality, within which lie a host of features that create the perfect cool environment for your food and drinks.

Design, convenience and functionality are the cornerstones of our philosophy, the essence of which is reflected throughout our entire range.

Miele refrigeration:
Experience the difference

Interior design
Easy cleaning and adjustability are just two of the factors to be considered when purchasing a new refrigeration appliance.

All Miele appliances feature shelves manufactured from safety glass. The shelves can hold up to 25 kg and are trimmed in white or chrome edging and our new models have stainless steel edging too, depending on the model. All are easily removed for cleaning purposes.

Glass shelving provides spill protection and has the additional benefit of helping maintain the interior temperature.

A selected number of shelves in all Miele appliances are adjustable, enabling you to make the best use of the space available. The majority of models also feature split shelves for added convenience.

Freezers drawers
Transparent freezer drawer fronts feature in the majority of Miele freezers. These allow a visual inspection of the contents without the need to pull out the drawer. A frozen food marker system enables a further indication of the drawer contents.

Miele drawers are enclosed on all sides, which helps to maintain the drawer temperature when it is opened and contain any accidental spillages.
They are easily removed for cleaning and are designed not to tip.

Interior doors
The Miele interior door shelving is made from high quality frosted or clear plastic with chrome framing and our new models have stainless steel edging too. All are height-adjustable and are easily removed for cleaning. A covered dairy compartment with lift-up lid protects the contents from transfer of odours. The lid stays open when raised for quick and easy access.

Consistent temperature control

Due to the natural circulation of air in the appliance, there are different temperature zones in the refrigerator. Cold, heavy air sinks to the lowest section of the appliance and warmer air will rise nearer the top. This has a bearing on where to place food to obtain the optimum results.

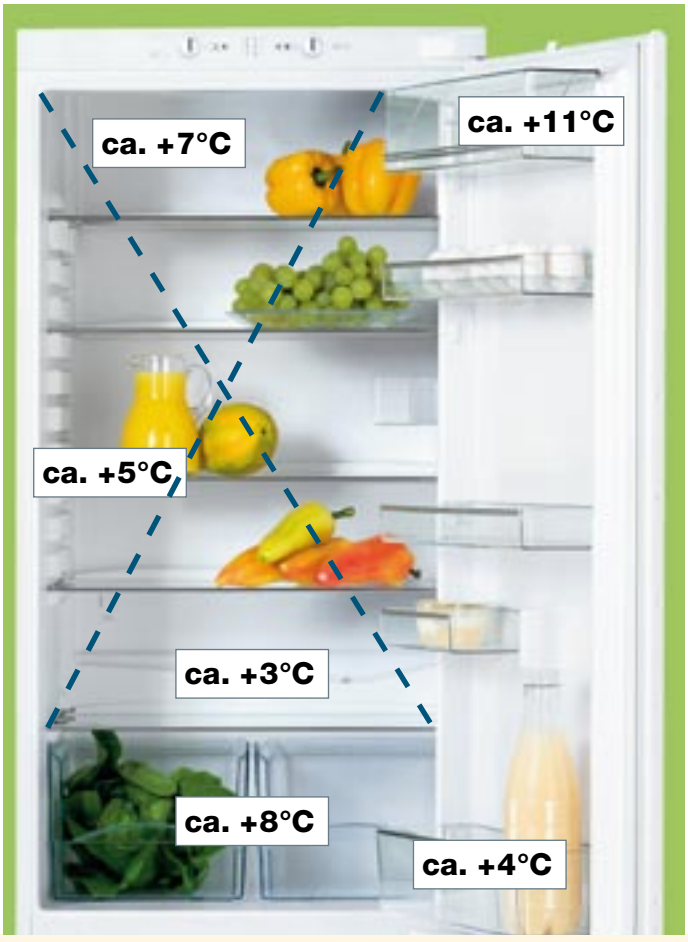
The Miele Dynamic cooling system, which features on a number of appliances, overcomes natural temperature imbalances by circulating cold air around the appliance.

This constant flow of air enables the temperature inside the appliance to be maintained at the same level throughout. This provides the benefit of allowing you to choose where to store your food.

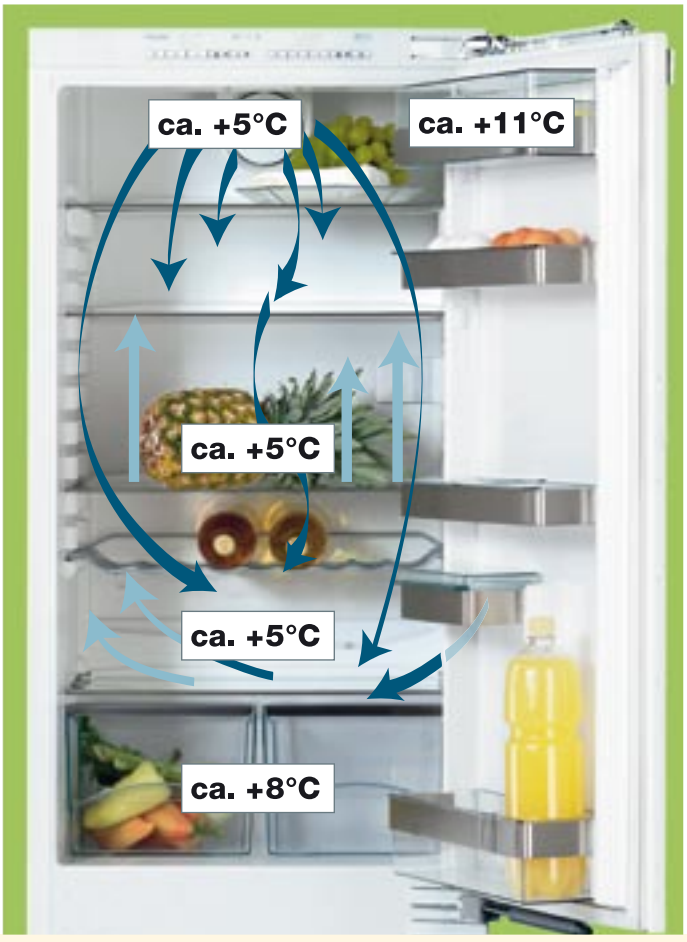
With Dynamic cooling the temperature is set in the normal way with the temperature control and the electronics ensure that the desired temperature is reached and maintained.

An additional benefit of Dynamic cooling is that food and drinks will be chilled up to 50% more quickly than in a conventional refrigerator without this feature.

Static cooling



Dynamic cooling



Perfect Fresh

The Perfect Fresh zone has a dry and a humidity controlled compartment and is particularly suitable for long term storage of fresh food. Because the temperature is electronically maintained at just above freezing point, fruit, vegetables, fish, meat and poultry can be stored for twice as long as in the refrigerator and still maintain their freshness. Tests have shown that vitamin C levels in food stored in the Perfect Fresh zone hardly change over a period of time, so its health benefits are great too. It is particularly suitable for storing fruit and vegetables as well as salad items which have a high water content and need to be kept moist.

The dry compartment is excellent for storing meat, fish, poultry and dairy products. And with relative humidity levels adjustable between 45% and 90% in the humidity controlled compartment, you can adjust the climate inside the compartment to suit the type of food you are storing.

Food	Compartment	How	Duration*
Green salad	Humidity controlled	Unpackaged	Up to 3 weeks
Berries	Humidity controlled	Unpackaged	Up to 5 days
Cabbage	Humidity controlled	Unpackaged	Up to 6 months
Root vegetables	Humidity controlled	Unpackaged	Up to 4 months
Fresh herbs	Humidity controlled	Unpackaged	Up to 4 weeks
Fruit with pips	Humidity controlled	Unpackaged	Up to 3 months
Fruit with stones	Humidity controlled	Unpackaged	Up to 4 weeks
Fish and shellfish	Dry	In its packaging, or a plastic container	Up to 4 days
Raw meat Cooked meat	Dry	In its packaging, or a plastic container	Up to 7 days Up to 10 days
Fresh poultry Cooked poultry	Dry	In its packaging, or a plastic container	Up to 5 days Up to 7 days
Cheese	Dry	In its packaging, in a plastic container or wrapped in plastic film	Up to 4 weeks
Yoghurt, sour cream	Dry	In its packaging, or a plastic container	Up to 4 weeks
Sausages	Dry	In its packaging, or a plastic container	Up to 7 days

* Storage times are guidelines only and depend on the quality and freshness of the food.
N.B. Some fruit and vegetables give off gases which cause them to deteriorate rapidly. These include bananas, avocado pears, pineapple, mangos, olives, papaya, passionfruit and citrus fruit as well as aubergines, cucumbers, green beans, potatoes, melons, peppers, tomatoes and courgettes.

User convenience

The new Active Charcoal filter is the only filter of its kind able to bind aromatic molecules and to neutralise odours such as those from fish to cheese.

The Active-Charcoal filter easily clips on the back of the refrigerator. The filter is exclusive to certain models with a refrigerator compartment. It involves a retainer guide on the rear trim of the glass shelves to facilitate fitting. A timer has been incorporated into the electronic controls for the purpose of when to replace the filter to ensure proper functioning and prevent unpleasant odours inside the fridge.

The filter housing contains 2 filters which fit into the unit. The retainer guide is sleek and discreet, prevents sliding and is conveniently designed for handling.

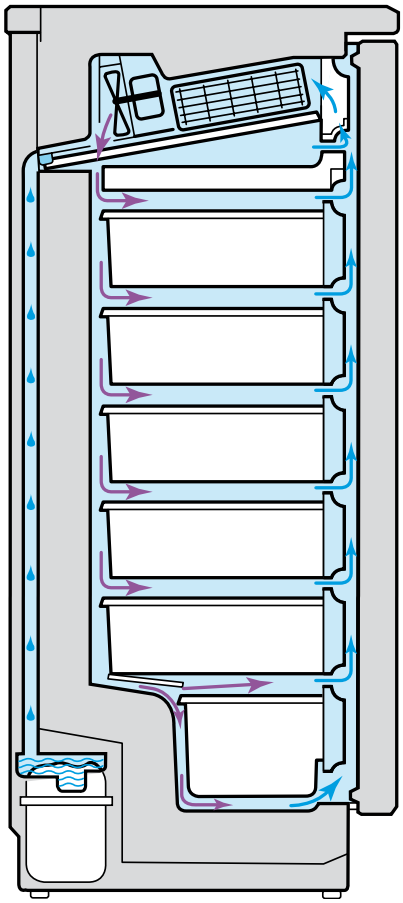
Ice in an instant

For cool drinks at parties and on long, hot summer days, ice is a must. However, in conventional fridge-freezers, it is not always instantly available. Miele's ice cube makers offer this convenience in freestanding and integrated models.

Between 100 to 120 perfectly formed ice cubes can be made in 24 hours (approximately 1.1 kg). When ready, ice is dispensed automatically into one half-sized freezer drawer where it can be stored until needed.

If ice is not required, the ice maker can simply be switched off and the storage container can then be used as a conventional freezer drawer.

N.B. These appliances have to be plumbed into a fresh water supply. A water filter kit is recommended for crystal clear ice to be made.



No more defrosting!

An increasing number of Miele refrigeration appliances have this important feature. Frost-free is a perfect system for optimum convenience and removes the tedious task of emptying and repacking the freezer. It results in zero build-up of frost on both food and the evaporator, saving time and electricity.

How it works…
In appliances which feature the frost-free system, cool air is circulated by a fan, enabling the food to freeze more quickly and thoroughly. Moisture in the air condenses and freezes on the evaporator, where it melts automatically and drains through a channel into a condensate tray. The heat from the compressor then causes the water to evaporate.

Enclosed evaporator
Selected frost-free models will now also feature a new enclosed evaporator. The evaporator, instead of being located at the back of the appliance will now fit into the front casing. The cabinet interior is surrounded on all sides by concealed aluminium evaporator tubing, which leaves the surface smooth on all sides and exceptionally easy to clean. The new positioning of the evaporator offers more flexible storage options, as the glass shelves can be removed easily allowing the drawers to accommodate much larger items.

Miele MasterCool

Introducing MasterCool

Miele's MasterCool refrigeration and wine storage appliances are state-of-the-art products designed to exceed the expectations of the discerning consumer, and offer unique solutions to preserve food and wine easily and safely without sacrificing freshness or texture. These appliances are crafted using only the highest quality materials, cutting-edge cooling technology and Miele's proprietary electronics made at our headquarters in Gütersloh, Germany. In every aspect, from the high performing dual cooling system to the intuitive MasterCool touch controls, Miele's legendary reliability is apparent, giving you peace of mind that your quality food and valuable wines are protected. Feast your eyes on these pioneering appliances which are set to become the new standard in large capacity refrigeration and wine storage units.

With MasterCool refrigerators the user is greeted by a food-driven menu system that is easy to view, understand and adjust for each of its four independent cooling zones within the cabinet (meat, fish, dairy and deli). This intuitive functionality helps to create and maintain the optimum conditions required for specific food categories so that freshness is maintained.

Combining MasterCool appliances

MasterCool appliances are based on a modular system for maximum flexibility and are designed to be fitted with either a stainless steel front panel or with a furniture front to match your kitchen (not supplied).Please select the hinge door opening when designing the kitchen as we do not recommend re-hinging/swapping door openings.

Please note a merging kit (side heating/ assembly kit-KSK 1002) is required when installing appliances side-by-side, available from Miele as an optional accessory.

Miele MasterCool

ClearView lighting
Miele's unique ClearView halogen lighting system cascades light from the top and sides of the appliance to achieve maximum illumination inside the cabinet. With no blind or dark spots you have a clear view of your food on all levels.

MasterFresh drawers
MasterFresh drawers keep everything from fruit and vegetables to salmon and cheese at the perfect temperature* and humidity level. Simply select the drawer location and type of food from the MasterCool menu, and the electronics will adjust and maintain the ideal conditions so your food is kept MasterFresh and nutritious for longer.
*(between 0.5°C and 3°C depending on food type selected).

Super cool and Super freeze
After stocking your fridge or freezer with a significant load of new groceries, engaging the Super cool or Super freeze function will override the thermostat and begin to rapidly cool the cabinet down to just under 2°C in the refrigerator and to -30°C in the freezer. Switching off automatically, after 6 hours in the refrigerator or 52 hours in the freezer, it's guaranteed to lock in freshness, taste and texture.

Drop and Lock system
Miele's Drop and Lock system uses a slide rail system to move shelves and door fittings. A onehanded 'tilt up and slide motion' is all it takes to move a door shelf higher or lower. Once located, simply let go and watch it automatically lock into position. Shelves are easily adjusted in 1.5 cm height adjustments by lifting them up at the front and sliding them up or down to the height you want them at before lowering them into position. A floating deli drawer in the refrigerator and unique divider system in the freezer compartment glide effortlessly across shelves or within drawers to maximize storage efficiency.

The stability hinge
Miele's stability hinge is capable of supporting a collective load of over 90 kg and is tested for over 200,000 door cycles… that's twice the industry standard. Fully loaded, with food on the inside and a heavy furniture door panel on the outside, these hinges can support a weight of up to 120 kg and ensure that the door will remain stable and secure over time.

Refreshing ice cubes... and more
The MasterCool freezers and fridge-freezer offer an Ice-maker or a water/ice dispensing unit (depending on model) so you can have a refreshing glass of cold water or a chilled drink with ice or crushed ice whenever you want. Thanks to Miele's Dual Compressor System there is no exchange of air between the ice maker and the rest of the freezer so flavours stay where they belong.

The perfect home for fine wines
Changes in storage temperature, however subtle, can dramatically affect the quality of wine. Miele's MasterCool electronic controls ensure a precise and constant temperature in the three independently controlled cooling zones, which can be used to store or temper red and white wines and champagne at their ideal temperatures. In each zone the bottles are gently cradled on one of 14 high-quality acacia shelves, two of which are fixed in place to separate the cooling zones, and the rest are extendable to make for easy viewing and access. Controlling the humidity level is also important for long-term wine storage. If the humidity is too low, the corks will dry out and no longer provide an effective seal. Miele's Dynamic cooling system ensures that the air and humidity are circulated evenly, alleviating the problem of dried corks and guaranteeing a perfect bouquet. An active charcoal filter keeps the air inside the appliance fresh so your delicate wines cannot absorb unwanted odours.

The unique LED system does not affect the internal temperature of the cabinet, and enables you to display your wines to perfection. Opening the door activates the ClearView halogen lighting so that you can view your collection and select the perfect bottle for the occasion.

Side-by-Side-Combination KFNS 4927 SDE ed

DESIGN
Free standing model with stainless steel (Front and side)
PerfectFresh/freezer combination with two cooling aggregates – possible separate power-down of refrigeration and freezer compartment
Separates cooling aggregate for the refrigeration compartment
Height-adjustable castors

ENVIRONMENTALLY FRIENDLY REFRIGERATION
SoftClose door damper
Refrigeration compartment:
Energy efficiency rating: A+
PerfectFresh/freezer combination: Energy efficiency rating: A
Energy consumption in 365 days:
529 kWh
Energy consumption per 100 litres: 0.22 kWh in 24 hours
CFC- and FC-Free

USABLE CAPACITY
Refrigeration compartment: 391 litres
PerfectFresh compartment: 157 litres
4-star freezer compartment: 119 litres
Total: 667 litres

CONTROL PANEL
Touch controls
Temperature control for the refrigeration compartment
Temperature control for the PerfectFresh and freezer compartment
Digital temperature indicator for the refrigeration/ PerfectFresh and freezer compartment
Separate temperature indicator for the refrigeration compartment

REFRIGERATION COMPARTMENT
LED interior lighting
DynaCool
Automatic SuperCooling
Active AirClean filter
Automatic defrost
Chrome-plated metal bottle rack
7 break proof shelves, some height-adjustable
2 fruit/vegetable drawers on telescopic runners

DOOR INTERIOR REFRIGERATION COMPARTMENT
VarioBord door rack system with removable serving racks
1 Self-Closing butter and cheese compartment
3 height-adjustable racks
2 bottle racks

4-STAR FREEZER COMPARTMENT
NoFrost-System
Plumbed-in Ice maker
SuperFreeze button
Freezing capacity in 24 hours: 14 kg
3 freezer drawers with transparent front
1 Half freezer drawer
VarioRoom – removable shelves to store bulky items
Each compartment is suitable for fast freezing
Insertable freezer tray
Frozen food marker system with freezer calender

PERFECTFRESH COMPARTMENT
LED interior lighting
Automatic defrost
Active AirClean filter
Dry zone with approx. 45% humidity with 2 removable tempered break proof glass shelves, one split shelf
Chrome-plated metal bottle rack
2 drawers, castor-mounted
Upper drawer as dry zone with approx. 45% humidity
Lower drawer as dry or humid zone with max. 90% humidity

ACCESSORIES
2 egg racks, 1 butter dish, 2 ice packs
1 stainless steel water hose of 1.5 m

NOISE POWER LEVEL
42 dB(A) re1pW

CLIMATIC RATING
SN-T

SAFETY
Optical and acoustic temperature alarm for the freezer unit
Max. storage in case of fault: 31 hours

DIMENSIONS
Height: 190 cm–192.5 cm
Width: 121 cm
Depth: 69.5 cm

N.B. This appliance must be plumbed into a fresh water supply.

The inner and outer qualities of Miele refrigerators

1 Precise temperature control
The temperature you select is controlled electronically and accurately. A temperature display on the control panel of some models will give you correct information about the temperature inside the appliance.

2 Super Cool and Super Freeze
The temperature inside the fridge-freezer can be set to the coldest level for a short time by pressing the Super Cool or Super Freeze button. This is particularly useful when chilling or freezing large amounts of food at once. By freezing food as quickly as possible, the consistency and texture of the food is maintained when defrosted. Auto switch off to save energy.

3 The alarm
Most Miele fridge-freezers have an alarm indicator light on the control panel and a buzzer which will sound if the temperature in the freezer rises, if the freezer door is kept open for longer than 60 seconds, and if there has been a power failure it will sound when the appliance is switched on again, reminding you to check the food.

4 Lighting
Miele fridge-freezers all have an interior light.

5 Dairy compartment
The convenient dairy compartment lid stays open when raised. Perfect for quick and easy access.

6 Dynamic cooling
The Miele Dynamic cooling system circulates the air evenly throughout the appliance so items can be stored on any shelf. This results in no moisture loss from the appliance, an even temperature throughout, no odour transfer between sections and efficient cooling performance. It is particularly useful in hot weather, ensuring the optimum cabinet temperature is quickly established once the door has been closed, and saves up to 50% of time when cooling fresh food.

7 Height adjustable glass shelving
Food can be safely stored on quality shelves made from safety glass. Most are height adjustable, and some are split shelves to allow for the storage of taller items. In this way the space inside the fridge-freezer is optimised.

8 Adjustable door shelves
The shelves in the door are made from a high quality, transparent plastic with chrome or stainless steel brackets. They are height adjustable and can be removed if required.

9 The Perfect Fresh zone
This zone is ideally suited to the storage of salad, vegetables, fruit, fish, meat and poultry. With a dry compartment and a humidity controlled compartment, it is ideal for delicate foods which can be kept fresh for two to three times as long as in a conventional refrigerator.

10 Large freezer drawers
A large amount of food can be stored in the spacious drawers, making economical use of space. Most models have transparent drawer fronts, enabling you to see what you have stored. They can be pulled out to the maximum extent without tipping and are solid all round so any spillages can be easily contained.

11 The frost free system
The circulation of cool air prevents frozen foods from frosting over and the freezer from icing up. Frost free appliances do not need to be defrosted, making the chore of defrosting a thing of the past and life easier for you.

12 Adaptable capacity
On frost-free models removing a drawer and the shelf beneath it enables you to store large, bulky items of food in the appliance. Ideal for large joints of meat and for the Christmas turkey!

Features common to all Miele fridge-freezers

CFC and HFC free
All Miele fridge-freezers are CFC and HFC free. To protect the environment from harmful gases, pentane is used in the insulation material and isobutane (R 600 a) in the circulation system.

Energy classification
Each appliance is classified on an EU standard scale of A++ (low) to G (high) according to its energy consumption. All Miele refrigeration rates A++ to B.

Reversible doors
Doors can easily be changed to the other side if required.

N.B. Features will vary from model to model. See product specifications for details.

Miele food centres – Side-by-Side Refrigeration

Miele offers a wide range of side-by-side combination appliances to cater for all your storage needs. By providing greater choice and flexibility you can be certain the needs and requirements of the whole family will be met. With a number of stunning options to choose from, it couldn't be easier to find the ideal combination of your choice.

With side-by-side appliances available in CleanSteel, you can create a truly professional look and co-ordinate with other appliances in the home. They are modern and elegant, yet ageless and versatile making them a talking point in any kitchen.

By giving you the flexibility to mix and match the features of your choice, you can, for example, choose whether to have a simple refrigerator and freezer combination, or perhaps to incorporate a Perfect Fresh compartment to keep food fresher for longer, and/or a larger freezer capacity for bulk freezing. If you like your wine stored at the correct temperature, you might like to include a wine cooler.

Most freestanding refrigerators and freezers have an ideal matching partner. Please refer to the individual product specifications for this information.

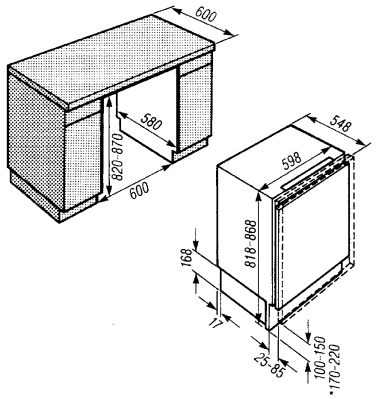
K 121 Ui-1, F 123 Ui-2



B

F 123 Ui-1

DESIGN
Fully integrated built-under freezer
Cabinetry door bolted to appliance front
Plinth ventilation
Plinth height and plinth return adjustable
Door hinged on right, convertible
Recess height: 820–870 mm
For combination with K121 Ui refrigerator (side-by-side)

ENVIRONMENTALLY FRIENDLY REFRIGERATION
Energy efficiency rating A
Energy consumption per 100 l usable capacity: 0.79 kWH in 24 hours
Energy consumption in 365 days: 288 kWh
CFC- and FC-free

USABLE CAPACITY
4-star freezer compartment: 107 l

CONTROL PANEL
Temperature controls
SuperFrost button
Buzzer Off‘ switch
LEDs for On/Off, buzzer and SuperFrost

4-STAR FREEZER COMPARTMENT
3 freezer drawers
Each drawer with its own evaporator, suitable for fast freezing
Freezer calender
Temperature indicator in door

ACCESSORIES SUPPLIED
2 ice packs
Ice cube tray

Wine

Anyone who appreciates good wine will know how important it is to store it in the right way. Wine is alive! And as such reacts either positively or negatively to its environment. Certain conditions need to be met in order for a wine to either mature properly or keep without spoiling.

Temperature is ultimately the most important factor. The optimum temperature for storing wine is between 10–12°C, but any constant temperature within 5–18°C is acceptable. Any change in temperature on a daily or weekly basis can have a detrimental effect on the wine and cause it to age prematurely.

If wines are kept at too high a temperature they will age faster, whereas if wines are stored at too cold a temperature, deposits will develop. This is why a constant temperature is vital.

“White wine is more temperature sensitive than red wine!”

Corks should always be kept moist, therefore storing bottles in a humid environment prevents them from drying out and therefore shrinking. If corks are allowed to dry out, they lose their elasticity and allow air to enter the wine affecting the overall taste. Storing bottles horizontally is also important as it allows the wine to remain in contact with the cork, again helping to keep the corks moist.

Extraneous smells and light can also be harmful to wine. Any unwanted smells can enter the wine through the cork, contaminating it, and ultraviolet light may give wine an unpleasant aroma. Therefore a proper ventilation system, such as an active charcoal filter which can be found in all our wine storage appliances, is very important in helping to retain the overall taste of the wine. A solid door or a glass door, which protects the wine from UV light is also a necessity.

Ultimately, wine needs to be given time to settle, allowing it to mature correctly. Any vibrations from, for example machinery or other appliances, can disturb the sediment within the wine, and damage it.

All these factors are important when storing wine and some excellent appliances have been developed by Miele, offering the perfect storage conditions in a number of different styles and dimensions. A must for wine-lovers.

At a glance temperature guide to storing your favourite wines:

8°C	Simple white wines and sparkling wines
10°C	Light white wines and champagne
12°C	Complex, heavy white wines, rosé and light red wines
14°C	Simple, young red wines
16°C	Strong, young red wines
18°C	Heavy, mature red wines

What Miele has to offer…

Wine storage units
If you don't have a cellar, the Miele KWL 4712 S ed and KWL 4912 S ed-1 wine storage units offer the ideal long-term storage conditions for red and white wine as well as champagne.

They regulate the temperature inside the cabinet between 5°C and 22°C, and if the temperature drops below the pre-set temperature, the appliance will automatically switch from cooling to heating in order to maintain the chosen temperature and protect the wine.

The KWL 4912 S ed features an insulated stainless steel door and the KWL 4712 S ed features a tinted, tempered glass door offering protection from UV light. LED lighting on the KWL 4712 S ed means you always have a clear view of what's inside.

These models also feature an exterior door lock, active charcoal filters and height adjustable wooden shelves.

Freestanding and built-under wine conditioning units
These appliances are ideal for both long-term and short-term storage, and offer separate temperature zones to ensure your red, rosé and white wines are all served at just the right temperature, time after time.

These models both feature a tinted, tempered glass door offering protection from UV light and lighting enabling a clear view of the contents, active charcoal filters and height adjustable wooden shelves.

If an integrated look is required, the built-under KWT 4154 UG-1 offers a perfect solution, fitting neatly under a worktop. It also has an integrated recessed grip handle which co-ordinates perfectly with the handles of other adjacent units.

For freestanding situations the 3 zone KWT 4974 SG ed with its full height tinted glass door is the perfect solution.

Wine combination
For those who have a requirement for wine storage, but do not have the space for a dedicated wine storage unit, the KWTN 14826 SDE ed/cs could be the ideal solution. Forming one half of a Miele combination centre, the bottom features a 119 litre capacity freezer below a 144 litre wine conditioning unit cellar, which holds up to 40 bottles.

Special features include two independently controlled compressors, separate controls for each section and an active charcoal filter to eliminate any unwanted odours.

This appliance is also the perfect side-by-side partner for the 398 litre capacity K 14820 SD ed/cs fridge, or the K 14827 SD ed/cs, which offers a 237 litre fridge section above a 100 litre Perfect Fresh compartment.

For more detailed information regarding KWTN 14826 SDE ed/cs please see page 27.

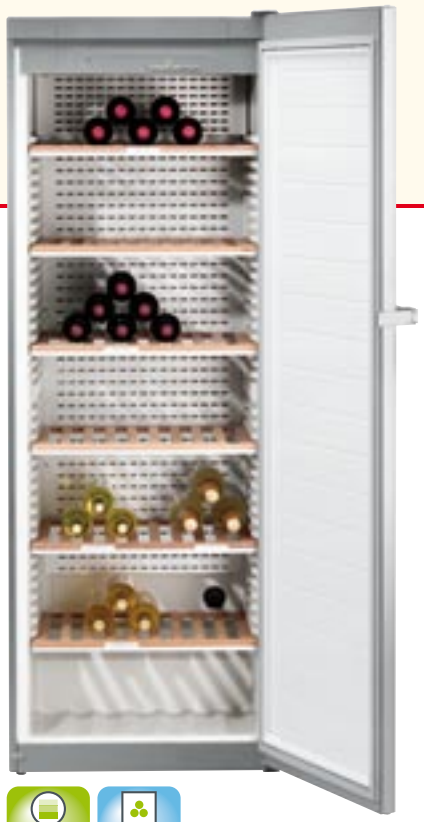
The Miele wine storage units

Picture: KWL 4712 S ed



KWL 4712 S ed Wine storage unit

DESIGN
Freestanding unit with 386 l/13.6 cu.ft. usable space
Maximum capacity 162 bottles (Bordeaux 0.75 litres)
Stainless steel casing with full-height glass door
Recessed handle
Inner cabinet light grey
Door hinged right, convertible

CONTROLS
Electronic soft touch controls concealed behind the door
ON/OFF button
Temperature regulation from +5–20°C using +/– controls
Digital temperature display
Lighting on/off control
Audible warning tone with OFF button

FEATURES
Dynamic cooling
6 storage levels including 5 height adjustable acacia wood shelves with labels
Fresh air intake via an active charcoal filter
Cabinet heater for low ambient temperatures
Constant humidity levels of up to 70%
Door lock
Interior lighting

DIMENSIONS
H x W x D 165.8 x 66 x 68.3 cm
Width door open 70.4 cm
Depth door open 126.2 cm

KWL 4912 S ed-1 Wine storage unit

DESIGN
Freestanding unit with 444 l/13.6 cu.ft. usable space
Maximum capacity 187 bottles (Bordeaux 0.75 litres)
Stainless steel casing with solid square metal handle
Inner cabinet light grey
Door hinged right, convertible

CONTROLS
Electronic soft touch controls concealed behind the door
ON/OFF button
Temperature regulation from +5–20°C using +/– controls
Digital temperature display
Lighting on/off control
Audible warning tone with OFF button

FEATURES
Dynamic cooling
7 storage levels including 6 height adjustable acacia wood shelves with labels
Fresh air intake via an active charcoal filter
Cabinet heater for low ambient temperatures
Constant humidity levels of up to 70%
Door lock
Interior lighting

DIMENSIONS
H x W x D 185.5 x 66 x 68.3 cm
Width door open 70.4 cm
Depth door open 126.2 cm

The Miele wine conditioning units

KWT 4154 UG-1 Wine conditioning unit

DESIGN
Built-in wine unit with 126 l/4.4 cu.ft usable space
Maximum capacity 38 bottles (Bordeaux 0.75 litres) – 15 bottles in the upper zone and 23 bottles in the lower zone
Tinted, tempered glass door
Door hinged right, convertible
Door opens to 90 degrees

CONTROLS
Child resistant electronic temperature control via soft touch buttons
Digital temperature display for each zone
Temperature regulation from +5–20°C
Constant humidity levels of up to 70%
Lighting on/off control
Audible warning tone with OFF button

FEATURES
Dynamic cooling
Charcoal filters
5 storage levels including 3 height adjustable acacia wood shelves with labels
Shelves carry weight of up to 50 kg
Fresh air intake via active charcoal filters
Interior lighting

DIMENSIONS
H x W x D 81.7 x 59.7 x 58 cm
Width with door open 64.2 cm
Depth with door open 116 cm

Two individually adjustable temperature zones

Acacia wood telescopic shelves

KWT 4974 SG ed Wine conditioning unit

DESIGN
Freestanding unit with 422 l/14.9 cu.ft usable space
Maximum capacity 143 bottles (Bordeaux 0.75 litres) – 36 in the upper zone, 45 in the middle zone and 62 in the lower zone
Stainless steel casing with full height glass door
Recessed handle
Inner cabinet light grey
Door hinged right, convertible

CONTROLS
Electronic soft touch controls for each zone concealed behind the door
ON/OFF button
Temperature regulation from +5–20°C using +/– controls
Digital temperature display
Lighting on/off control
Audible warning tone with OFF button

FEATURES
Dynamic cooling
13 storage levels including height adjustable acacia wood shelves with labels
2 in the upper zone, 3 in the middle zone and 5 in the lower zone
Fresh air intake via an active charcoal filter
Cabinet heater for low ambient temperatures
Constant humidity levels up to 70%
Door lock
Interior lighting

Notes

Miele support and The Miele Service Certificate

The price of a Miele appliance does not just cover the product, it also buys you excellent service.

Not only can you expect expert product advice from our well trained agents, we also have a team of Home Demonstrators and a Customer Services Department, based at our Head Office in Bryanston, Durban and Cape Town. They will be pleased to offer advice and information to establish which is the right appliance for you and help you make the most of it after you have taken it home. If you are considering purchasing a selection of Miele Appliances, why not make an appointment to visit our showrooms in Bryanston, Brooklyn Pretoria, Durban or in Cape Town. Here most appliances in the range are on display and one of our appliance experts will show you around and discuss your requirements in depth.

Should something go wrong, just one call is all it takes to arrange for one of our service technicians to visit. They are equipped with laptop computers for rapid diagnosis of faults, which means less inconvenience to you. When a part is used from van stock, it is automatically reordered and replaced, so stock is always up-to-date.

In addition, we have a large Spare Parts division able to offer advice and sales of any spare part or accessory you require. As Miele appliances are designed to last a long time, parts and instruction books are held for 15 to 20 years after a model is discontinued, so even an “oldie” can be repaired.

Miele Service Certificate

The Miele Service Certificate:
The 10-year Comprehensive ‘peace of mind’ Service package directly from Miele.
Miele appliances stand for top quality, optimum user convenience and a long life expectancy. The Miele Service Certificate provides you with maximum service protection. This exclusive service certificate guarantees that Miele will assume all costs incurred for any repairs for up to 10 years after your purchase date.

The Miele Service Certificate:
The Miele Service Certificate gives you complete peace of mind for 8 years after the standard 2-year manufacturer’s warrantee has expired. Miele offers professional support and expert troubleshooting from just one source: 08600 64353
• Free-of-charge additional services
In addition to repair cover, this certificate provides consumers with further exclusive services:
• ‚Satisfaction-guaranteed‘ money-back scheme
• Fast track support from Miele’s call centre as a premier Miele Customer
• Provision of replacement appliances in emergencies (conditions apply).
• Direct ordering of Miele accessories

For more information ask your sales person or contact Miele on 0860 000 622

Other products

As well as the superb range of refrigeration appliances you've seen here, Miele also offers domestic washing machines, tumble dryers, dishwashers, ovens, microwave ovens, steam ovens, food warmers, coffee machines, hobs and hoods. And for the finishing touch, Miele's powerful vacuum cleaners help keep the house clean.

Miele also make machines for commercial applications and offer a wide range of high throughput dishwashers, washer-disinfectors, washing machines and dryers as well as rotary ironers for use in hotels, guest houses, hospitals and laboratories. For further details on any of these, as well as Miele's nationwide Service, contact Miele Head Office in Bryanston.
